

## 2020 Presidential Candidate HIV Questionnaire

***Presented By* The Act Now: End AIDS Coalition, AIDS United, GMHC (Gay Men's Health Crisis), Health GAP, Housing Works, The International Association of Providers of AIDS Care, LAMBDA Legal, Positive Women's Network-USA, Prevention Access Campaign, Sero Project, Transgender Law Center, The US People Living With HIV Caucus, and 41 other community based organizations**

The Presidential candidates in 2020 have a unique opportunity to make history. For the first time since the Centers for Disease Control originally reported a few HIV cases in its Morbidity and Mortality Weekly Report 38 years ago, **we are able to end the HIV epidemic in the United States.** Scientific advances and groundbreaking HIV research have shown us that it is not only possible for people to live long, healthy lives with HIV, but that people on antiretroviral medication who have achieved (and maintain) an undetectable viral load cannot transmit the virus to others (commonly referred to as "undetectable equals untransmittable," or U=U). Period. This knowledge is powerful, yet there is much more needed to affect the change we need.

Over one million Americans are living with HIV, and annual HIV diagnoses continue to hover around 40,000 new HIV transmissions each year due in part to increases in injection drug use across the country that are resulting in new HIV outbreaks, especially in areas with scarce public health resources. It is only through significant federal investment in the following programs and an unyielding commitment to providing access to the support services needed to ensure populations impacted by HIV adhere to their care and treatment that we will be able to end the HIV epidemic

To better understand how presidential candidates will take advantage of the moment to seek an end to the epidemic, many organizations within the HIV/AIDS community have signed on in support of this questionnaire. We ask that your campaign review and complete this survey by close of business on Friday, July 19th. This will allow us to compile and release the results in the early stages of the primary campaign. We will publish the responses without any editing. Thank you very much for your participation in this questionnaire. Please send your responses or any questions you have about the questionnaire to [policy@aidsunited.org](mailto:policy@aidsunited.org)

1. Earlier this year, the Trump administration introduced their plan for ending the HIV epidemic in the United States by 2030. While the HIV community welcomes the increased financial resources and attention being paid to HIV by the administration, we also understand that to end the HIV epidemic we must address the social determinants of health and inequities that have led to a high-burden of transmission for HIV, STDs, and associated illnesses within vulnerable populations. Please describe what you would do to increase access to HIV prevention and treatment services, and outline your approach for addressing the social determinants of health and promoting racial justice.

2. U.S. HIV research investments have saved millions of lives, prevented countless new transmissions of the virus and placed us on a potential path to end the HIV epidemic. Do you support increasing dedicated HIV research funding to promote treatment advances, prevention efforts, and attempts to identify a vaccine and a cure?

What, if any, changes to the current HIV prevention and research funding levels would you propose?

3. The opioid and HIV epidemics are two of the most pressing public health challenges of our time and they are increasingly intertwined. With 41,000 new cases of hepatitis C in the United States in 2016, of which, up to 70% occurred among people who use drugs, injection drug use is continuing to be a major factor fueling the domestic HIV epidemic. Do you support the use of federal funds to implement evidence-based substance misuse prevention and treatment strategies, including federal funding for the syringes provided at syringe exchange programs, to help address opioid addiction? What will your strategy be to extend medication to combat overdoses (i.e. naloxone) and medication-assisted treatment (MAT) to reach everyone experiencing opioid disorders?

4. The Ryan White HIV/AIDS Program provides care and treatment for people living with HIV in the United States who are uninsured or underinsured and has demonstrated its success at linking and retaining people in care, improving both individual health outcomes for enrollees, and a reduction in new HIV transmissions. Do you support increased funding for the Ryan White Program and for networks of people living with HIV that provide peer support and combat stigma? What changes, if any, would you make to the program and its funding?

5. Although millions of individuals have been insured through the implementation of Medicaid expansion and the Affordable Care Act, lack of access to healthcare is still a major driver of the HIV epidemic. If elected, how will you ensure that all people living with and affected by HIV have access to affordable healthcare? Please state your position on the ACA, and outline your views on the best ways to extend high-quality, low-cost healthcare to everyone, regardless of age, income, immigration status, or pre-existing condition--including in states that have not expanded Medicaid?

6. The Housing Opportunities for Persons with HIV/AIDS (HOPWA) program is the sole dedicated funding source for housing assistance and related supportive services for low-income people living with HIV and their families. Currently, HOPWA remains chronically underfunded despite the fact that housing has a greater impact on health outcomes for people living with HIV than any other factor, including demographics, substance use, mental

health, or access to social services. Do you support increased funding for the HOPWA program and other programs that provide housing for people living with HIV?

7. What will you do to prohibit discrimination based on sexual orientation, racial and gender identity in housing, healthcare, the workplace, the legal system, privately-owned businesses, and access to federal benefits?

8. Americans living with HIV continue to be subject to stigma and discrimination, and many are subject to outdated and stigmatizing criminal laws where they are susceptible to enhanced sentencing based upon their HIV status. These laws violate the human rights of people with HIV, sometimes imposing extremely severe punishments on people with no intent to harm and behaviors that pose no risk of HIV transmission. Moreover, these statutes discourage those at risk from learning their HIV status and subsequently beginning treatment to extend their longevity and quality of life. Will you work to pass a law that ends the criminalization of HIV status? Will you work to extend federal protection from discrimination based on HIV status? What other steps, if any would you take to help reduce HIV/AIDS stigma and discrimination in the United States?

9. Given the advances in medical treatment available to all servicemembers for over two decades, do you support lifting unnecessary restrictions that prevent individuals living with HIV from enlisting, being commissioned as an officer, or deploying in the Armed Forces of the United States?

10. Despite the existence of antiretroviral medications that can render the viral load of a person living with HIV undetectable (and therefore untransmittable), and prevent transmission of the virus through pre-exposure prophylaxis (PrEP) many people in need of such medications cannot access them because of their high cost. In other instances, our insurance premiums go up, and/or taxpayers are stuck holding huge costs. If elected, how will you reduce excessive drug prices in the United States, through executive action, as well as legislation? Will your plan make use of government purchasing power to negotiate lower prices and work towards policies similar to all other developed countries to limit abuses of the patent monopoly system?

11. According to the CDC, an estimated 14% of transgender women are living with HIV, with an estimated 44% identifying as Black/African-American, 26% Hispanic/Latinx, and 7% White. The number of transgender people who received a new HIV diagnosis was 3 times the national average. If elected, would you support the original interpretation of Section 1557 of the ACA as covering transgender people and would you champion the passage of the Equality Act? How would you protect the rights, well-being, and lives of transgender people living in this country, while ensuring that they receive the healthcare and housing necessary to be virally suppressed?

12. Many documented and undocumented immigrants living with and affected by HIV are refraining from seeking out HIV and general medical care due to fear of deportation or denial of citizenship. Please state how you would encourage this population to be screened for HIV and initiate treatment if diagnosed, and how to ensure healthcare spaces are safe spaces for immigrants and health providers from immigration enforcement? What are your views on potential changes to the “public charge” rule that would make any use of a very wide range of benefits (including healthcare programs such as the Affordable Care Act marketplace subsidies, Children’s Health Insurance Program and potentially some Medicaid benefits) detrimental to an immigrant’s chances at becoming a U.S. citizen?

13. The escalating pace of the introduction and passage of federal and state bills that restrict legally protected health care services, including abortion and some forms of contraception, is already having adverse effects on young people, women, and people living with HIV. How will you ensure all women and people of childbearing potential that, regardless of income, geography, or any other stigmatizing restriction, they will have unfettered access to all of their needed sexual and reproductive health services? Additionally, how will you communicate the government’s full support of sexual and reproductive health, rights, and justice of all people living with HIV and those who may be vulnerable to contracting HIV?

14. In recent years, the need for comprehensive prison and justice system reforms that focus on rehabilitation and the wellbeing of those who are incarcerated rather than punishment has become clearer than ever. What will you do to ensure that incarcerated people living with HIV and those who may be vulnerable to contracting HIV receive uninterrupted, unfettered and fully funded access to healthcare and medications for treatment both while they are in prison or jail, and when they are released for re-entry into their communities?

15. Ending the HIV epidemic in the United States is also dependent on ending the HIV epidemic across the globe. Traditionally, the US has taken a leadership role in funding for both PEPFAR and The Global Fund, but recent years have been characterized by flat-funding and the threats of massive cuts in funding for fighting these pandemics. Would you commit to launch a stepped up effort to end the deadliest pandemics, including AIDS, and prepare for and prevent epidemic threats of the future with expanded results-oriented programming, doubled US investment in fighting pandemics, and US leadership to rally the world to join us in this effort?
